DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a viral vector for the recombinant production of a protein comprising a packaging sequence with at least two codons altered to reduce the occurrence of fusion proteins, classified in class 435, subclass 320.1.
- II. Claims 13-33, drawn to a viral vector for the recombinant production of a protein comprising a packaging sequence with at least two codons altered to reduce the occurrence of fusion proteins and a proviral recovery sequence, classified in class 435, subclass 320.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and different effects and are not disclosed as capable of being used together. Specifically, the vector of invention II comprises an additional element, the proviral recovery sequence, which is not present in the viral vector of invention I. As a result, the viral vectors comprise different nucleotide sequences and thus have different structures and functions. In addition, the viral vectors have different effects, owing to the presence of the viral recovery sequence of the vector of invention II, which affects the elements required for the

Art Unit: 1636

recovery of the provirus. Because the inventions have different functions and effects the inventions are patentably distinct.

Because these inventions are distinct for the reasons given above and the non-patent literature search required for Group I is not required for Group II (owing to the presence of the proviral recovery sequence in the vector of invention II), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A Lambertson whose telephone number is (703) 308-8365. The examiner can normally be reached on 8am-4:30pm.
